Building build agents

Build Server Third Generation

i.e. how rg-build05 is set up

Software

1. Get IS to give you a blank VM: Windows Server 2008 R2, 4 CPUs, 4GB RAM (may be dynamic - crazy Hyper-V stuff), 75GB C:, 50GB D:
2. Install all the Windows updates
3. Upgrade to IE 9 -- <http://windows.microsoft.com/en-gb/internet-explorer/download-ie>
4. Add RED-GATE\automated.build and RED-GATE\Build Master to the Administrators group
5. Turn of IE ESC for both admins and users
6. Install Microsoft .NET Framework 3.5.1 -- Server Manager -> Features -> Add Features -> .NET Framework 3.5.1 Features -> .NET Framework 3.5.1 -> I
7. Install all the Windows updates (a few for .NET 3.5.1)
8. Install Microsoft Visual Studio 2012 Premium -- \\red-gate.com\files\Disks\Development Software\Visual Studio\Premium\2012\vs_premium.exe
 - Deselect Expression Blend
 - Deselect Lightswitch
9. Run Microsoft Visual Studio 2012 as automated.build so that the first run wizard has completed
 - Install all the Windows updates (published after Microsoft Visual Studio 2012 Premium)
 - Run VS, and under Tools -> Extensions and Updates, apply any updates
10. Install Microsoft Windows SDK 7.1 -- <http://www.microsoft.com/download/en/details.aspx?id=8279>
 - Uninstall Microsoft VC++ Redistributables (x86 / x64) v10.0.40219 (or the SDK installer will fail; will be installed again by SDK and updated)
 - deselect Windows Native Code Development -> Samples
 - deselect Windows Native Code Development -> Visual C++ Compilers
 - select Redistributable Packages -> Application Verifier
 - select Redistributable Packages -> Debugging Tools
 - select Redistributable Packages -> Windows Performance Toolkit
 - Re-install VC++ Redistributable (x86 / x64) v10.0.40219: <http://www.microsoft.com/en-gb/download/details.aspx?id=8328> and <http://www.microsoft.com/en-gb/download/details.aspx?id=8329>

redgate

Building build agents

- Spin up a new VM with the OS installed
- Install Puppet Agent
- Sign the node
- Classify the node
- Wait.

redgate

Building build agents

```
# Build agent for BI stuff
node 'rg-buildbi01.red-gate.com' {
  include tcbase
  include buildserver
  include licensingtestnet
  class { visualstudio: versions => ['2013'] }
  class { tcagents: buildAgentsToMake => 1, isStandardBuildMachine => true, has_SSDT => true , service
  include windowsupdates
}
```

redgate

Windows package management

```
1  class javasesdk
2  {
3    package { 'java.jdk':
4      ensure   => installed,
5      provider => 'chocolatey',
6      require  => [Exec['install-chocolatey'], Package['javaruntime']],
7    }
8  }
```

```
1  class openmanage
2  {
3    package { 'Dell OpenManage Systems Management Software (64-Bit)':
4      ensure      => '7.4.0',
5      source      => '\\rg-puppetmaster01.red-gate.com\puppetdata\Dell\OpenManage Server Admin',
6      install_options => ['/qn'],
7    }
8  }
9  |
```

redgate

Not always so easy...

```
1 class visualstudio ($versions)
2 {
3   if member($versions, '2010')
4   {
5     package { 'Microsoft Visual Studio 2010 Premium - ENU' :
6       source      => "${tcbase::shareb}\\VS2010\\Setup\\Setup.exe",
7       install_options => ['/unattendfile Custom.ini', '/quiet', '/norestart'],
8       require      => [Package['Microsoft Windows SDK for Windows 7 (7.1)'], Exec['NET-Framework-Core']],
9     }
10    package { 'Microsoft Visual Studio 2010 SDK SP1' :
11      source      => "${tcbase::shareb}\\vssdk2010extracted\\vssdk.msi",
12      install_options => ['/qb'],
13      require      => [Package['Microsoft Visual Studio 2010 Premium - ENU']],
14    }
15
16    # Workaround 1 from http://blogs.msdn.com/b/vcblog/archive/2011/03/11/10140139.aspx
17    file { 'C:/Users/Public/Desktop/vs2010SigningWorkaround.ps1' :
18      ensure      => 'file',
19      source      => 'puppet:///modules/buildserver/vs2010SigningWorkaround.ps1',
20      source_permissions => ignore,
21    }
22    exec { 'rewriteTargetsFile':
23      command => "C:/Users/Public/Desktop/vs2010SigningWorkaround.ps1",
24      provider => powershell,
25      require => [File['C:/Users/Public/Desktop/vs2010SigningWorkaround.ps1'], Package['Microsoft Visual Studio 2010 SDK SP1']],
26    }
27  }
28  if member($versions, '2012')
```

The harder bits

- Ordering / dependencies not always clear
- Installers of variable quality
- User profiles – particularly UAC
- Credential security
- Discipline!

redgate

Next?

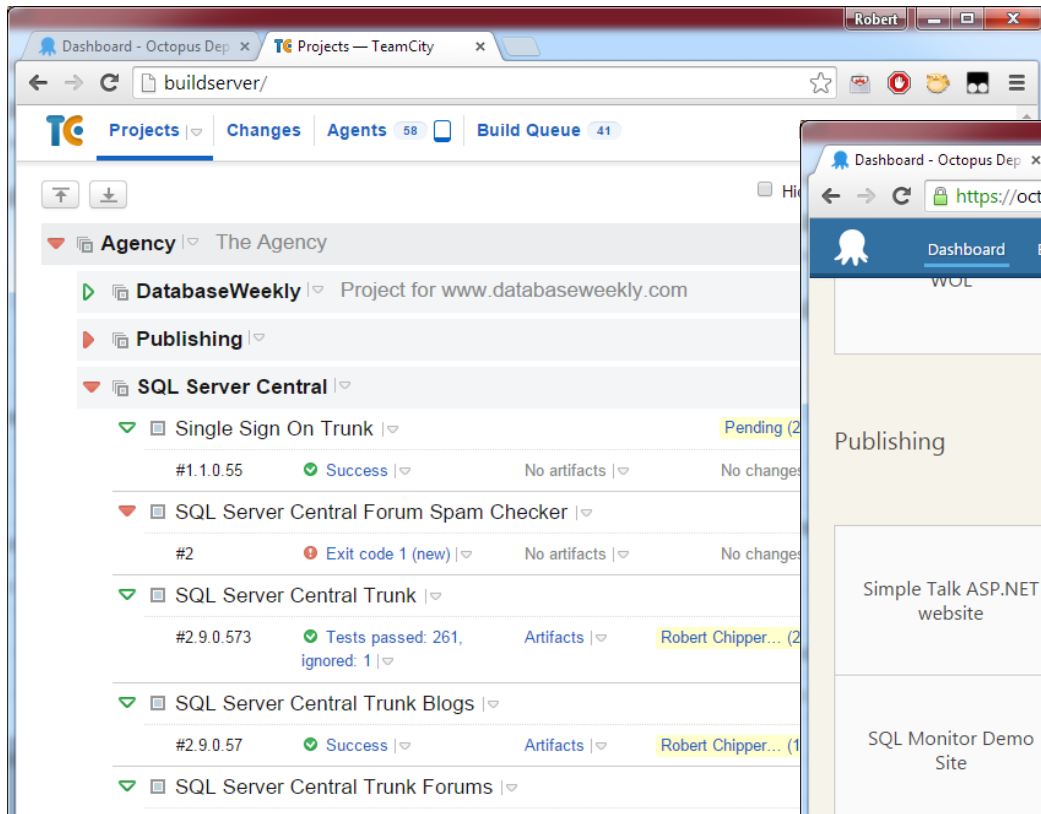

- Anything you have more than one of
 - ...or have to rebuild frequently
 - ...or have to know its configuration
-
- Probably not core MS infrastructure (DCs, System Center suite, WSUS, ...)
